Finance

Build in the right order. Every time.

HighLevel will let you build anything in any sequence. That is the problem. Each layer depends on the one before it.

1 FOUNDATION
Build this first. Everything else sits on top of it.

2 STRUCTURE
Your operational architecture. Defines how contacts and revenue move.

3 CONTENT & AUTOMATION
Only build this once the foundation and structure are complete.

Settings & Infrastructure **Custom Values** **Custom Fields** **Tags** **Pipelines & Opportunity Stages** **Calendars** **Products & Payments** **Forms & Surveys** **Funnels & Websites** **Email Templates** **SMS Templates** **Workflows & Automations**

The rule: Never build on a foundation that is not finished. Wire a workflow before your custom fields exist and the workflow breaks. Build a funnel before your calendar is configured and the booking breaks.

ROI PRIORITISATION MATRIX

Build this first
High impact, low complexity. Fast result. This is your business. Do not fix it before anything else.

Build this second
High impact, low complexity. Fast result. This is your business. Do not fix it before anything else.

Fill the gaps
Low effort, low impact. Good for momentum but do not let these distract from the top two.

Not yet
High effort, low return right now. Park it. Revisit at the 90-day cycle review.

GAP SCORING TABLE

Step 1 **Step 2** **Step 3**

1. Time cost if left unfixed **2. Revenue cost per month** **3. Complexity to fix** **4. Speed to see results**

Total score **12** **14** **16**

The Playbook

Desired Outcome **Start** **Actual** **Finish** **Exit** **Copy / Assets / Tech**

1. Time cost if left unfixed **2. Revenue cost per month** **3. Complexity to fix** **4. Speed to see results**
